

That rash or sore might be
SYPHILIS

STDs are on the rise in SF

ASK TODAY. GET TESTED. GET CURED.

Esa sarpullido o llaga puede ser

SÍFILIS

ETS estan en aumento

Informate, Hazte la prueba, curate.

SYPHILIS is a sexually transmitted disease (STD) and is increasing in women in San Francisco County. **Syphilis symptoms may appear and then disappear and may include:**

- a painless sore inside or near the mouth, genitals or anal areas
- a rash that appears on the palms of hands, bottom of feet, or on the body between the arm pits and upper thighs

If a woman is infected with syphilis while pregnant, it can lead to birth defects, miscarriage, premature birth and stillbirth.

Good News: Syphilis can be treated and cured even during pregnancy with a shot of antibiotics.

Get free, walk-in syphilis testing at the following locations:
